

Flatten Subsystem Tool

June 2017

McMaster Centre for Software Certification (McSCert)

1 Introduction

The Flatten Subsystem tool automatically flattens a Simulink subsystem, that is, it moves the subsystem contents up one level, reconnects the signals, and removes the subsystem block. This tool is useful for making quick transformations to a model by automating the tedious task of manually copying and connecting the many elements contained in a subsystem.

Note: This functionality has been since included in MATLAB/Simulink 2014a as the “Expand Subsystem” operation¹. This tool is still beneficial for earlier versions of MATLAB/Simulink, as well as handling more types of subsystems

More Information

For more information on the tool and how it can be used in a model-based development with Simulink, please refer to the following papers:

2 How to Use the Tool

This section describes what must be done to setup the tool, as well as how to use the tool.

2.1 Prerequisites

Please ensure the following, before using the tool:

- Use MATLAB/Simulink 2011b or newer.
- The tool is present in your MATLAB path.
- The Auto Layout Tool is present in your MATLAB path. This tool is packaged with the Flatten Subsystem Tool.
- The model is open (or loaded, for command line use).

2.2 Getting Started

The tool can be used via the Simulink Context Menu, which can be viewed by right-clicking in a model. The *Flatten Subsystem* option is available, as shown in Figure 1.

2.3 Functionality

Right-clicking on a subsystem in the model and then selecting **Flatten Subsystem** from the Context Menu will flatten those subsystems. Any blocks that are considered subsystems can be flattened, including atomic subsystems, code reused subsystems, etc. These types of subsystems are not supported with Simulink's built-in **Expand Subsystem** function.

2.4 Errors and Warnings

Any errors or warnings during tool use will be visible in the MATLAB Command Window. Typically, errors will be shown when the model is locked or function parameters are incorrect.

3 Example

Use the command `FlattenSubsystemtDemo` in the Simulink command window to open the example model, shown in Figure 2 and 3. This simple example has a single subsystem, which contains a few blocks.

To flatten this subsystem, right-click on the subsystem in Figure 2 and select the **Flatten Subsystem** option. The resulting model is shown in Figure 4.

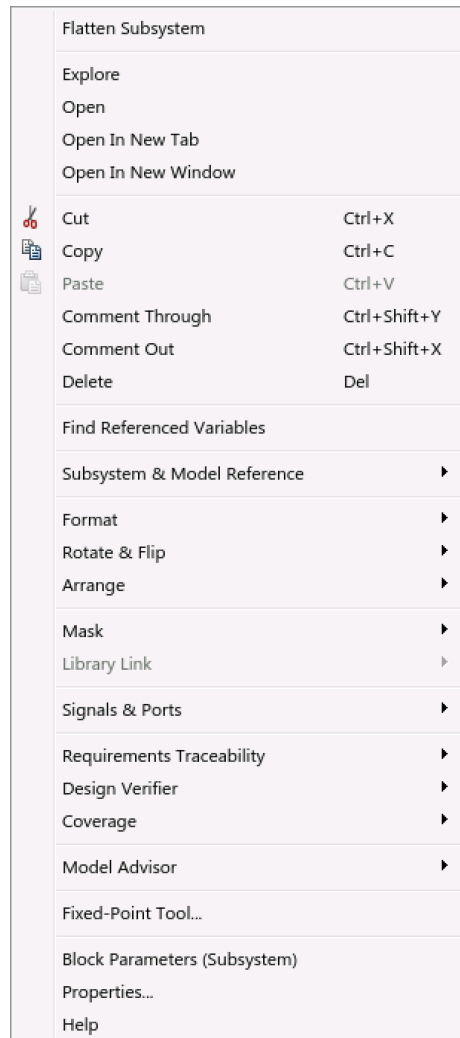

Figure 1: Simulink Context Menu with tool option visible.

Figure 2: Flatten Subsystem demo: The FlattenSubsystemtDemo model before flattening the subsystem.

Figure 3: Flatten Subsystem demo: The subsystem from Figure 2 before flattening.

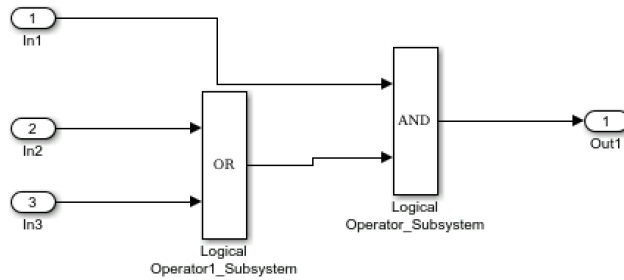

Figure 4: Flatten Subsystem demo: The FlattenSubsystemDemo model after flattening.

4 Matlab Commands

The tool can also be used via the MATLAB command line, with the following function(s).

Function	FlattenSybsystem
Syntax	FlattenSybsystem (<i>address</i> , <i>subToFlatten</i>)
Description	Takes all blocks in <i>subToFlatten</i> and moves them to up one level, while also removing the subsystem.
Inputs	<i>address</i> : Simulink model name.
	<i>subToFlatten</i> : Cell array of subsystems to flatten.
Outputs	N/A
